

Jorden Lowe

Senior Software Engineer

SUMMARY

Senior Software Engineer with 14+ years of experience building cloud-native solutions, distributed systems, and data platforms. Specializes in Azure architecture, CI/CD automation, and infrastructure as code. Proven ability to deliver scalable solutions in healthcare and enterprise environments. AZ-104 certified; AZ-305 in progress.

SKILLS

Languages: C#, JavaScript/Node.js, TypeScript, SQL

APIs & Data: REST APIs, OAuth2, Databricks, SQL Server, PostgreSQL

Frontend: AngularJS, Angular

AI Tools: Claude Code, ChatGPT, Google Gemini, MCP

Cloud & Infrastructure: Azure, Terraform, Bicep, Docker

DevOps: Azure DevOps, CI/CD Pipelines, Git

Tools: Visual Studio, Confluence, Jira

WORK EXPERIENCE

Senior Software Engineer — Rater8

10/25 – Present

Full-stack engineer on a healthcare SEO platform, delivering features across backend services, Azure infrastructure, CI/CD pipelines, and AI tooling. Tech: C#, .NET, Angular, Azure, Bicep, Azure DevOps, Datadog.

- Reduced Angular CI pipeline runtime from 34m35s to 9m42s (3.6×) by enabling `isolatedModules` and tuning `maxWorkers` in `ts-jest`, saving ~23 minutes per build.
- Cut GMB Sync location processing from 45 minutes to 5 minutes and increased review throughput from 600/hr to 2,000/hr by converting single-threaded processing to a multi-threaded architecture.
- Designed and shipped the HubSpot company sync as an Azure Function, establishing it as the team's first reference architecture for managed identity → Key Vault → SQL patterns.
- Led end-to-end design of an AI coding-agent workflow (story → plan → PR) and a PR-review agent, spanning tooling integration across Jira, Bitbucket, ADO, and Confluence.
- Designed a Datadog monitoring solution to track pipeline queue throughput and detect processing deficits — identified a structural flaw in the original metric design, redesigned using corrected OTel counters and a slope-based alert, and scoped per-source attribution into a clean follow-up story.
- Deployed a Rapid AI-Assisted Development (RAD) reporting server to staging and production via Bicep + ADO pipeline, enabling clients to

pull AI-generated reports and menus from a dedicated service.

- Earned Microsoft Azure Administrator (AZ-104) certification; drove Bicep-first IaC adoption across the team with supporting tooling, standards, and Azure Infrastructure Guide.
- Defined the Playwright-in-CI approach (Docker + ADO pipeline + JUnit/HTML reporting) and broke it into an actionable story set.
- Authored the CI/CD Pipeline Executive Summary, driving January's story-planning work and establishing a prioritized five-item modernization roadmap.
- Rewrote developer onboarding documentation with cross-team input, improving setup guidance by role and OS.

Senior Software Engineer — Health Catalyst

05/23 – 10/25

Member of the PopAnalyzer and Insights team, developing features to take data from a data warehouse and create populations and visualizations. Also responsible for all platform applications of the Databricks system. Tech: AngularJS, SQL (PostgreSQL and SQL Server), Databricks, .NET, Azure, Azure DevOps.

- Lifted and shifted application from on-premises to Azure-native solution.
- Developed infrastructure using Bicep and Terraform.
- Built solution to import schema information from Databricks for configuring the query engine to generate a population.
- Implemented Custom Columns allowing users to create functions using NCalc to define new columns within Populations.
- Researched Pivot Table alternatives for Populations to allow users to drill down to details for finding trends and making decisions.
- Provided client support and guidance on product usage.
- Redesigned documentation wiki to organize Runbooks, design docs, and How-Tos.

Senior Software Engineer — Linus Health

11/22 – 05/23

Integrated with EHR APIs to allow the Brain Health Platform to transmit Brain Health Assessment data. Tech: Node.js, TypeScript, AWS, Terraform, GitHub.

- Managed full end-to-end integrations with Athena Health APIs and Redox (FHIR).
- Built infrastructure using Terraform in AWS.
- Logged errors to S3, DynamoDB, and CloudWatch.
- Built Lambda Orchestration design documents in Confluence.

Senior Software Engineer — Cardlytics

10/21 – 11/22

Part of the Data Team, managing REST and GraphQL APIs to expose processed data in dashboards and reporting.

- Shifted applications from on-premises to cloud using Terraform, Kubernetes, and Docker.
 - Deployed and maintained CI/CD pipeline using Octodeploy and TeamCity.
 - Developed GraphQL and REST endpoints to optimize API client access to data.
 - Transformed applications to leverage AWS PaaS (API Gateway, Lambda, SQS).
 - Mentored junior developers on enterprise-level software practices.
-

Senior Software Engineer — Great Lakes Psychology Group

11/20 – 10/21

Led cloud and healthcare technology initiatives, working directly with the COO to build an internal EHR system.

- Designed and reviewed initial technology stack and system architecture.
 - Created authorization and authentication system using MongoDB Realm.
 - Built initial GraphQL API from MongoDB Realm.
 - Mentored team on development process and user story design.
-

Senior Software Engineer — Health Catalyst

04/17 – 11/20

Patient Safety Team — Angular application reading from the In-Home data warehouse to display patients with safety issues and alert clinical staff.

- Designed client-side authorization for Patient Safety Roles, Groups, Users, and Permissions.
- Developed automated testing in CI pipeline in Azure DevOps.
- Created backend Filter system using Strategy pattern to standardize filtering approaches.

Security Team — Managed Authentication via Azure AD and OAuth2 (Identity Server), as well as Authorization.

- Implemented Azure AD into Identity Server integration for clients with network trust restrictions.
- Managed full build process using Docker images in Azure DevOps.
- Built features into Authorization site to manage permissions, groups, and roles.

Data Team — Development and release of data warehouse Metadata for the Health Catalyst platform.

- Served as team Scrum Master.
 - Added OAuth integration to lock down access to metadata.
 - Maintained strong unit and integration test suite for regression testing.
 - Mentored new team members.
-

Software Project Lead — Panasonic Automotive

04/16 – 04/17

Led development and release of a cloud music service (Aupeo) running on AWS, built in Ruby, MySQL, PostgreSQL, and Cassandra.

- Guided a team of 5 developers across 3 releases with formal release plans.
 - Deployed applications in under 30 minutes through streamlined DevOps collaboration.
 - Developed API documentation using Swagger.
 - Acted as Product Owner to investigate and create requirements documentation.
 - Established GitFlow branching scheme.
-

Senior Software Engineer — Quicken Loans

01/12 – 04/16

API Gateway Team — Enterprise software to aggregate and secure internal APIs; Java-based, RAML-modeled, deployed on AWS and on-premises.

- Identified performance bottlenecks in TLS 1.2, VPN tunneling, clustering, and JVM using JMeter.
- Improved developer efficiency generating REST clients from RAML specifications.
- Mentored developers on REST, microservices, API design, and CI through workshops and talks.

Document Repository Team — OnBase document management for the mortgage process.

- Redesigned document export system, reducing investor onboarding from one week to a few hours; system exported several million documents per week to 50+ clients.
 - Built RESTful Hypermedia API enabling developer self-service document access.
-

CERTIFICATIONS

AZ-305 Azure Solutions Architect Expert (*in progress, 2026*)

AZ-104 Microsoft Azure Administrator — 2026

AZ-900 Microsoft Azure Fundamentals — 2024

EDUCATION

Master's Degree in Computer Science — University of Michigan, 2009

Bachelor's Degree in Computer Science — University of Michigan, 2006
